

switch Self Check

Question

1/1 point (graded)

Inspect the following code.

```
01 static void Main(string[] args)
02 {
03     string response = "";
04     switch (response)
05     {
06         case "connection_failed":
07             // Block of code executes if the value of response is "connection_fail
08             break;
09         case "connection_success":
10             // Block of code executes if the value of response is "connection_succ
11             break;
12         case "connection_error":
13             // Block of code executes if the value of response is "connection_erro
14             break;
15
16         // Block of code executes if none of the above conditions are met
17         break;
18     }
19 }
```

Choose the correct code to enter at line 15.

☐ break;

☐ quit;

☒ default: ✓
